

Operations System — Intern Task

Deadline: submit within 2 days of getting this message.

Project link: <https://github.com/Nehemia-joh/qrcode>

You will start the project, log in, then build a small Python report script for Operations.

1. Get the project

- Open the project link above.
- Click Fork.
- On your computer, open a terminal and run:

```
git clone  
https://github.com/YOUR-GITHUB-USERNAME/qrcode.git
```

```
cd qrcode
```

Use your real GitHub username in that link.

2. Start the system

Run:

```
bash scripts/start-all.sh
```

If a port is already in use, run this, then start again:

```
bash scripts/stop-all.sh
```

```
bash scripts/start-all.sh
```

Wait until it finishes starting.

3. Open and log in

Open Operations:

```
http://localhost:8080/login
```

```
Username: admin
```

Password: admin123

Then open Bus QR:

<http://localhost/school-bus-tracking/>

If that does not open, try:

<http://localhost:8081/>

Username: admin

Password: admin123

Take a screenshot of each page after login.

4. Build this (Python)

Create this file:

`scripts/ops_intern_report.py`

What the script must do:

- Check if the Operations API is running at:

```
http://localhost:4000/api/health
```

Print API status: UP or DOWN

- Read this sample data file:

```
data/sample_students.json
```

- From that data, calculate and print:
- total students
- how many have balance less than 0 (in credit / overdue)
- the names of those in-credit students
- total balance of all students
- Save the same report into:

```
docs/intern-submissions/YOUR-NAME-report.txt
```

```
Example file name: docs/intern-submissions/Asha-Juma-report.txt
```

Rules:

- Use Python 3
- You may use only the standard library (urllib, json, pathlib) or install requests if you prefer
- Do not hardcode the student list inside the script. Read it from the JSON file.
- Put your full name on the first line of the report file

Run it like this:

```
python3 scripts/ops_intern_report.py
```

Take a screenshot of the terminal output.

5. Add your notes file

Also create:

```
docs/intern-submissions/YOUR-NAME.md
```

Put this inside:

```
Intern name: YOUR FULL NAME
```

```
GitHub username: YOUR GITHUB USERNAME
```

```
Date completed: YYYY-MM-DD
```

```
One thing I noticed in Operations: one short sentence
```

```
One improvement idea: one short sentence
```

6. Submit on GitHub

Run:

```
mkdir -p docs/intern-submissions
```

```
git add scripts/ops_intern_report.py docs/intern-submissions/
```

```
git commit -m "Add intern ops report script and submission"
```

```
git push origin main
```

Then on GitHub:

- Open your fork
- Click Contribute → Open pull request
- Target repo: Nehemia-joh/qrcode
- Title: Intern assessment - YOUR FULL NAME
- Create the pull request

We will review your pull request on our side.

7. Send by email

Send:

- Screenshot of Operations after login
 - Screenshot of Bus QR after login
 - Screenshot of your Python script running in the terminal
 - The link to your Pull Request
 - A few lines on what worked and what did not
-

If you get stuck

Write the exact error and which step failed.

Do not share the passwords with other people.

Good luck.
